## THE NATURAL HISTORY REVIEW (VOLUME 11)

General Books. Paperback. Book Condition: New. This item is printed on demand. Paperback. 202 pages. Dimensions: 9.7in. x 7.4in. x 0.4in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1864 Excerpt: . . . than in man; its innermost division, equal in size to one-third of the whole, diverging abruptly from the rest of the muscle, sent its tendon along the metatarsal of the great toe, parallel with the tendon of the last-named muscle, to be attached to the base of the second or terminal phalange of that toe; its external division gave a tendon to each of the four outer toes. Each toe, then, in the Chimpanzee, has at least a long and a short extensor for its phalanges, whilst the great toe has two additional extensors, one for its metatarsal, and another for its cuneiform bone, to ensure free and varied mobility in opening the foot; the fifth toe has one additional extensor, as in man, namely, the peroneus brevis. Of the four extensors of the great toe, the two innermost seem to represent the tibialis anticus of human anatomy, the next would answer to the extensor proprius pollicis, except that it is inserted into the base of the first instead of the terminal phalange, and the fourth to the hallucal portion of the short extensor, except that it is attached to the terminal instead of the proximal phalange. It may, however, be said that, in the peroneal and extensor regions, we have all the usual foot muscles represented, though with certain modifications of arrangement. In the sole of the foot, the three superficial muscles, abductor pollicis, flexor brevis digitorum, and abductor minimi digiti, were, as in...
