Split Hopkinson pressure bar test results for the rate dependence of SC-15, a thermoset polymer matrix material, were used as a guide for an initial guess of the rate-dependent properties. SC-15 epoxy is a low-viscosity, two-phased toughened epoxy resin system consisting of phase A ( resin mixture of diglycidylether epoxy toughener ) and phase B ( hardener mixture of cycloaliphatic amine poluoxylalkylamine ) 13 . The assumed rate dependence for SC-15 is plotted as a solid line in gure 8, where the circles represent the experimental data. Due to the complexity of the constitutive model many parameters need to be determined; these are, modulus, yield stress ratio, power law expo-nent, and material damping. The known inputs can be seen in table 2. In a brittle epoxy sample, a test that subjects the panel to failure provides...
