Instead, a prominent dextrorotatory compound in a given group is selected as a standard and all other members of the group which stand in a genetic relationship to this substance receive the prefix dwhile to the optical opposites of these compounds is given the prefix The convenience of such an arbitrary standard will be more apparent as we proceed. The principle involved can, however, be made clear from the following simple case. Let it be supposed that a given acid rotates the plane of polarized light to the right, while its ethyl ester (as might well be the case) rotates to the left. It is obvious that it is more important that the nomenclature employed should show the relationship of the acid to its ester than that it should record the specific action of either upon the plane of...
